

### Extended Benefits (EB) Overpayment Detection Measure CY 2013

State level data for the EB overpayment detection measure are very erratic for the calendar year (CY) 2013 measurement period. Estimated overpayments for this measure are based on the period June 1, 2012 to July 31, 2013, and overpayment recoveries are based on the period January 1, 2013 to December 31, 2013. The six-month lag reflects the period generally required by state Benefit Payment Control activities to identify and establish overpayments for recovery.

Because EB is an episodic program that triggers on and off according to the state's unemployment rate, improved labor market conditions during the period resulted in a sharp decrease in EB program outlays, from just under \$927 million in the April to June 2012 quarter to \$0.8 million in the October to December 2013 quarter (see chart).

These changes in EB program outlays can be even more dramatic at the state level. Therefore, many states reported relatively large EB overpayment recoveries in CY 2013 compared to program outlays during the 12-month period ending June 30, 2013. Many of these established overpayments reflect EB program outlays prior to April 1, 2012.

Additional information on the EB program is available at <http://workforcesecurity.doleta.gov/unemploy/extenben.asp>.

Notes: BPC EB data are for January 2013 to December 2013  
BAM data are for July 2012 to June 2013  
EB amount paid is for July 2012 to June 2013  
^ BAM data estimated due to missing reports.  
\* BPC EB data estimated due to missing reports.  
# Fraud and nonfraud recoverable overpayments; includes work search,  
ES registration, and benefit year separation issues; excludes  
base period wage, base period separation, and other miscellaneous issues.  
+ Overpayments established adjusted for quarters for which EB data were not reported.  
Excludes penalties assessed for fraud.  
@ Excludes quarters in which insufficient BAM and/or BPC data were reported.
